

# Lab Task

A teacher wants a simple system where students enter their marks and the system automatically calculates whether the student has passed or failed. This system will be used only for learning PHP form handling and conditional statements.

## Task Requirements

### HTML Requirements

- Form with:
  - Student Name
  - Marks
  - Submit button

### PHP Requirements

- Retrieve form data using `$_POST`
- Use **if / else** condition:
  - $\text{Marks} \geq 50 \rightarrow \text{Pass}$
  - $\text{Else} \rightarrow \text{Fail}$
- Display the result on the same page
