**Lab Task 09: Multi-section Layout Using Display Property**

**Instruction:**

- 1. Complete the task**
- 2. After completion, push the code in the GitHub repository.**

**Scenario:**

You're building a News Portal Layout with a sidebar for categories, main content area for articles, and a right panel for advertisements. Each section should align horizontally and maintain structure across screen widths.

**Steps:**

1. Create three boxes: Sidebar, Main Content, and Advertisement.
2. Use display: inline-block to position them side by side.
3. Assign different widths (e.g., 20%, 60%, 20%) and background colors.
4. Add padding, borders, and margins for spacing.
5. Ensure boxes align properly without wrapping to the next line.
6. Add a heading and some text inside each section.
