Lab Task 01: Styled Student Profile Page

Instruction:

- 1. Complete the task**
- 2. After completion, push the code in the GitHub repository.**

Scenario:

You are creating a Student Profile Page for your department website. Each student has a dedicated page with personal info and a short bio. The layout must look clean, centered, and well-spaced using CSS box model principles.

Steps:

1. Create a webpage named profile.html.
2. The page should include a **header**, **profile section**, and **footer**.
3. Use **external CSS** (create a style.css file) and link it properly in <head>.
4. Inside the profile section:
 - Add the student's **name**, **photo**, **department**, **student ID**, and **short bio**.
 - Center-align the section using margin: auto and a fixed width.
5. Apply the **box model**:
 - Add padding inside the profile box.
 - Add a border around the section.
 - Use margin to separate each section.
6. Use **CSS units** (px, %, em) for font sizes and layout.
7. Round the student image corners using border-radius.
8. Add a light background color to the profile section.
