Lab Task 08: Overflow Handling Box

Instruction:

1. **Complete the task**
2. **After completion, push the code in the GitHub repository.**

Scenario:

You're testing overflow behavior for a text widget. The goal is to see how different overflow settings affect content that doesn't fit inside a fixed box.

Steps:

1. Create a <div> with a fixed width (300px) and height (200px).
2. Insert long text or multiple paragraphs inside the box.
3. Test and apply each overflow value:

   - visible
   - hidden
   - scroll
   - auto

4. Comment in your CSS which property is used and what effect it creates.
5. Add borders and padding for clarity.
