Lab Task 04: **Restaurant Menu Page**

Instruction:

1. **Complete the task**
2. **After completion, push the code in the GitHub repository.**

Scenario:

Design a webpage for TasteHub Restaurant that displays a digital food menu. It should have separate sections for Starters, Main Course, Desserts, and Drinks. Each item should include a name, short description, and price. Add navigation links at the top that jump to each menu category on the same page.

General Requirements:

- Build a single-page restaurant menu website named menu.html.
- Use semantic HTML elements to structure the layout properly (<header>, <nav>, <main>, <section>, <article>, <footer>).
- Use anchor links (<a href="#id">) for smooth in-page navigation to different menu categories.

Steps:

1. Header Section (<header>)
   - Display the restaurant name: TasteHub Restaurant using a heading tag (<h1>).
   - Add a tagline below it (e.g., "Deliciousness Delivered Fresh Every Day!").
   - Optionally include a logo image on the left side or above the title.
   - Include a navigation bar (<nav>) with links to the menu categories:
     - Starters
     - Main Course
     - Desserts
     - Drinks
   - These navigation links should jump to their respective sections on the same page using anchor links (e.g., Starters).

2. Main Content Area (<main>)

- Divide the menu into four sections, each wrapped in a <section> element:
    - Starters (id="starters")
    - Main Course (id="maincourse")
    - Desserts (id="desserts")
    - Drinks (id="drinks")
- Each section should:

    - Begin with a heading (<h2>) for the category name.
    - Contain multiple menu items represented using lists (<ul> or <ol>).
    - Each menu item should include:

        ➢ Dish name in bold or strong tag.
        ➢ A short description (1–2 lines).
        ➢ A price displayed neatly at the end (e.g., $12.99).

    - Optionally, you can wrap each dish in an <article> tag for clearer separation.

- Add images of selected dishes in each section (use local or online image URLs).
- Ensure all images have appropriate alt text.
- Include a "Back to Top" link (Back to Top) at the end of each section for smooth navigation.

3. Special Additions (Intermediate Complexity):

- Include a "Chef's Special" section (optional) that highlights 2–3 featured dishes using a <fieldset> and <legend> for emphasis.
- Add a daily offers area using <aside> on the right side (or below the main menu if layout isn't covered yet).
- Use <hr> to visually separate sections.
- Include a "Book a Table" link at the bottom that could later lead to a reservation form (use a dummy link: href="#").

4. Footer Section (<footer>)

- Add contact details:
    - Restaurant Address
    - Contact Number
    - Opening Hours
- Include small social media icons or text links (use # for href).
- Add copyright: © 2025 TasteHub Restaurant | All Rights Reserved

- Add a link at the bottom of the footer: "Back to Top" (Back to Top).

5. Metadata (<head> Section)

- Include:
    - <title>TasteHub Restaurant Menu</title>
    - <meta charset="UTF-8">
    - <meta name="author" content="Your Name">
    - <meta name="description" content="TasteHub - Explore our mouth-watering restaurant menu with starters, main course, desserts, and drinks.">
