Lab Task 03: Navigation Bar Styling

Instruction:

1. **Complete the task**
2. **After completion, push the code in the GitHub repository.**

Scenario:

You are building a Website Navigation Bar for a company homepage. The navigation bar should appear horizontally at the top, with clear spacing and visible hover effects.

Steps:

1. Create a <nav> element containing 5 links: Home, About, Services, Gallery, Contact.
2. Display links horizontally using display: inline-block.
3. Add padding and margin for spacing between links.
4. Apply text-decoration: none to remove underlines.
5. Add :hover effects to change text or background color.
6. Set a background color for the entire <nav> bar.
7. Use block-level styling so the nav bar spans the full-page width.
